With regards to the above request for feedback on the proposed Full SMS Sender ID regime, we would like to raise the following clarifications :

1. Clause 26 : Aggregator's not participating in the program cannot handle the Sender IDs even if the Sender IDs are registered. How will this be enforced and who will do the blocking?
2. Are purely Numeric Sender IDs to be included in this scheme? E.g. Longcodes and Shortcodes

We hope to receive clarifications on the above. Thank you.

Best Regards,

Nicholas Chong
