To All Interested Participants

CORRIGENDUM FOR CALL FOR PROPOSAL TO DESIGN, BUILD, OWN AND OPERATE A CHILLED WATER PLANT (WITH OPTION FOR AN INTEGRATED POWER PLANT) IN DATA CENTRE PARK

1. With reference to the Call for Proposal that was published on 5 June 2012, please note the following:
 - (a) An embedded generator may apply to EMA for a waiver of the requirement to maintain 90-day fuel reserves for its generating units that generate electricity primarily (ie at least 50%) for its own use. Such embedded generators shall manage their own fuel arrangement prudently and must be aware that the national electricity system may not be able to provide them with sufficient electricity supply in the event of prolonged disruption in the supply of fuel including natural gas to the generation companies.
2. Thank you.
