

ANNEX D

FACT SHEET: CLOUD COMPUTING FOR SINGAPORE GOVERNMENT

The Singapore Government Cloud or G-Cloud is the next-generation infrastructure which leverages on the benefits of cloud computing to provide resilient computing resources to meet security and governance requirements across the whole-of-government.

Agencies can currently subscribe to a full range of Infrastructure-as-a-Service for hosting Government websites and e-services. Services available for subscription include compute, storage, network, security, operating systems, middleware and databases.

The Government will further identify Software-as-a-Service offerings, such as business analytics and web content management, to be made available on G-Cloud in the near future.
