

## **ANNEX A**

## **Fact Sheet**

# **Cloud computing for Singapore Government**

The Singapore Government acknowledges that each cloud computing model provides its own level of assurance and benefits. As such, the cloud strategy for Singapore Government is to leverage the appropriate cloud for the appropriate need by adopting a multi-prong approach to cloud computing as follows:

- Leverage commercially-available public cloud offerings for appropriate needs<sup>1</sup> so as to benefit from lower cost of computing resources;
- Implement a private government cloud (G-Cloud) for whole-of-government use where security and governance requirements cannot be met by public clouds;
- Enable interoperability between G-Cloud and agency Clouds<sup>2</sup> through a set of internal G-Cloud standards.

<sup>&</sup>lt;sup>1</sup> For instance, the Ministry Of Education's iCONnect system is a collaboration and email system for teachers built on a public cloud.

<sup>&</sup>lt;sup>2</sup> Agencies may set up dedicated clouds to address specific needs which cannot be met by public clouds and G-Cloud

## More Information on G-Cloud

G-Cloud is the next generation whole-of-government infrastructure. It will provide efficient, scalable and resilient cloud computing resources and will be designed to meet different levels of security and governance requirements:

- High Assurance Zone a physically dedicated computing resource pool which will only be used by Government to serve its high assurance needs.
- Medium Assurance Zone a computing resource pool which will be shared with non-government cloud users to lower cost computing resources for Government with security controls in place; and
- Basic Assurance Zone a computing resource pool based on public cloud offerings.

To further aggregate the whole-of-government demand to maximise cost savings to the Government, the Government will identify and provide Software-as-a-Service offerings, such as business analytics, customer relationship management and web content management.

G-Cloud enables standardisation, and sharing of computing resources and applications at the whole-of-government level, thereby generating cost savings to the Government.
