

ANNEX A – QUOTES

“Based on feedback from cleaning providers and associations like the Environment Management Association of Singapore (EMAS), V3 saw the gap between the operational workflow of the market, what’s currently available and how V3 can plug this gap with the use of technology. Together with IDA, V3 spearheads this innovative solution which is scalable and can be readily deployed to address this need for SMEs,” said Mr Wong Shih Jon, V3 Teletech, Managing Director.

“We encourage innovative solutions such as the Robot-as-a-Service provided by V3 Teletech. We are excited to use this solution and show how this pilot project will be able to benefit cleaning companies in Singapore and spearhead the usage of such technology to develop a manpower-lean growth,” said Milton Ng, Ramky, Managing Director.

“NTUC supports SMEs to be pioneers and early adopters of change. It is heartening to see progressive companies like Ramky tapping on the LED Scheme to transform themselves and grow in this new manpower-lean landscape. Technology can allow our workers to be upskilled, be more productive and better remunerated. We should work with more employers for such innovation to be pervasive at our workplace; and jobs can be made more effective, smarter and safer.” said Desmond Choo, LED Taskforce, Co-Chair.
