

# UNCOVER BEHAVIORAL INTELLIGENCE THROUGH NATURAL VOICE

Optimise decision-making with intelligent, predictive analytics to identify a person's personality, intent & emotional state, to deliver insights for your organisation.

## Enables smarter, faster decision-making

Across sectors such as healthcare, finance, retail & public, to assess mental health, customer engagement, risk management & human resource support.

## Captures voice data in natural settings

Identifies behaviour, personality, intent & mental state of person from short, real voice interactions. No transcripts or questionnaires needed.

## Language agnostic, free from cultural bias

Works beyond content, language, cultures and accents, using proprietary privacy-first models, not LLMs and open source data.

## Easily embedded into workflow, securely

Deployable as API or SDK across mobile, web or on-premise systems. Trusted in private & public sectors.
