Annex – Quotes from WG members

- "As part of GovTech Singapore's ongoing commitment to advancing sustainability in ICT across the Singapore Government, we will be incorporating the energy efficiency baselines from SS 715:2025 into the upcoming IT Bulk Tender. This will require suppliers of enterprise-class IT equipment to meet the standard's energy efficiency requirements. Additionally, we will mandate the use of energy-efficient IT equipment within government data centre hosting environments. These initiatives are part of our broader efforts to reduce the public sector's carbon footprint and accelerate the adoption of greener, more sustainable digital infrastructure, supporting Singapore's long-term sustainability goals."
  - Richard Tay, Senior Director, Government Productivity Engineering, GovTech Singapore

- "Equinix is dedicated to advancing energy efficiency and sustainability for the data center industry. Over the years, we have made significant enhancements in power usage effectiveness globally and in Singapore. The new Singapore Standard 715:2025 marks a crucial step forward. Along with our own sustainability initiatives, the standard will allow us to collaborate with our customers to improve energy efficiency of their IT equipment and our data centers."
  - Gavin O'Reilly, Senior Director of IBX Operations, Singapore, Malaysia and Indonesia, Equinix
