

Dear Sir/Madam,

I am concerned about the health impact of a 5G rollout as I am familiar with the various studies linking RF radiation to a variety of health issues from allergies and asthma to a variety of cancers.

As you know there has been pushback in various countries including Belgium, the US and Italy owing to health and safety/wellbeing issues. Scientists have also appealed to halt 5G based upon the anticipated significant adverse health impact, which will add to the impact of existing wireless technology.

Thus I hope you choose not to roll out 5G for health reasons. I also know of electrosensitive individuals who react quickly to such radiation.

Regards,

David Skinner
