Telecommunications Standards Advisory Committee (TSAC)

The TSAC advises IMDA on the setting of ICT standards as well as on the development and recommendation of specifications, standards, information notes, guidelines and other forms of documentation for adoption and advancement of the standardisation effort of the Singapore ICT industry (hereafter termed “IMDA Standards”).

Telecommunications standards-setting in Singapore is achieved with the assistance of TSAC, where professional, trade and consumer interest in telecommunications standards is represented on the TSAC with representatives from network and service operators, equipment suppliers and manufacturers, academia and researchers, professional bodies and other government agencies.

List of TSAC Members (2021-2024)

TSAC Chairman:

Technical Specification for Cellular Base Station and Repeater System

1 Scope

This Specification defines the minimum technical requirements for Cellular Base Station and Repeater System (broadly termed “CBS” in this Specification) to be used in the Public Mobile Radio Communication System and services which employ:

- (a) ITU IMT-2000 radio interface technologies (UTRA FDD and E-UTRA FDD) identified in ITU-R M.1457-14, and transposed from 3GPP Release 8 and 9;
- (b) ITU IMT-Advanced radio interface technologies (LTE-Advanced) identified in ITU-R M.2012-4, and transposed from 3GPP Release 10 and beyond;
- (c) LTE-Advanced technology series from 3GPP Release 13 onwards, marked with LTE-Advanced Pro; and
- (d) ITU IMT-2020 radio interface technologies (5G NR) identified in ITU-R M.2412-0, and transposed from 3GPP Release 15 and beyond.

Note: CBS’ support of the Global System for Mobile Communications (GSM¹) technology is no longer required after 31 March 2017.

4 General Requirements

4.1 Power Supply

The CBS may be AC powered or DC powered. For an AC powered equipment, the Specification shall be complied with when operating from an AC mains supply of voltage, $230V \pm 10\%$ and frequency, $50 \text{ Hz} \pm 2\%$. Where external power supply is used (e.g. AC/DC power converter), it shall not affect the capability of the equipment to meet the requirements of this Specification.

4.2 Electromagnetic Compatibility (EMC) and Equipment Safety Requirements

4.2.1 EMC assessment

For EMC assessment, the CBS shall be classified as equipment for fixed use. This equipment classification is used to determine the applicability of the EMC (emission and immunity) testing requirements based on §7 of ETSI EN 301 489-1. The ETSI EN 301 489-1 standard shall be used in conjunction with the ETSI EN 301 489-50 standard for CBS.

4.2.1.1 EMI or emission measurements

The following emissions measurements shall be performed on the CBS, where applicable:

- (a) Radiated emissions from associated ancillary equipment not incorporated in the CBS shall be measured to Class B requirements defined in §5 and Tables A.4 and A.5 of CISPR 32; or §8.2 of EN 301 489-1;
- (b) Conducted emission at the DC power port of the CBS shall be measured according to §8.3 of EN 301 489-1;
- (c) Conducted emission at the AC mains port shall be measured for CBS with dedicated AC/DC power converter to Class B requirements defined in §5 and Table A.10 of CISPR 32; or §8.4 of EN 301 489-1. Equipment with DC power port which is powered by a dedicated AC/DC power converter is defined as AC mains powered equipment (§3.1.1 of CISPR 32);
- (d) For current harmonics emission the test methods of either IEC/EN 61000-3-2 or IEC/EN 61000-3-12 shall apply;
- (e) For voltage fluctuations (Flickers) the test methods of either IEC/EN 61000-3-3 or IEC/EN 61000-3-11 shall apply; and
- (f) Conducted emission at the wired network port of the CBS shall be measured to Class B requirements defined in Table A.12 of CISPR 32; or §8.7 of EN 301 489-1.

4.2.1.2 EMS or immunity testing

The following immunity tests may be performed on the CBS to requirements defined in CISPR 35, or §9 of EN 301 489-1, where applicable:

- (a) RF electromagnetic field (80 MHz to 6 GHz) at the enclosure of equipment;
- (b) Electrostatic discharge at the enclosure of equipment;
- (c) Fast transients (common mode) at DC power and AC main power ports that have cables longer than 3 m;
- (d) RF common mode 0.15 MHz to 80 MHz at DC power and AC mains power ports that have cables longer than 3 m;

- (e) Voltage dips and interruptions at AC mains power port of equipment with dedicated AC/DC power converter; and
- (f) Surges, common and differential mode at AC mains power port of equipment with dedicated AC/DC power converter.

4.2.2 Equipment safety testing

Equipment suppliers (including manufacturers, importers, distributors, retailers and other traders) shall ensure that they only place products which are safe on the market. They can enhance the safety of their products by the following ways:

- (a) Vigorously testing their products before placing them on the market;
- (b) Ensuring that their products are certified to international safety standards;
- (c) Where products are already under the purview of other government agencies, ensure that they satisfied the relevant regulatory requirements by the agencies; and
- (d) Informing users/consumers of any potential hazards or risks arising from the use of their products.

Equipment shall comply with the IEC 62368-1 (minimum Ed. No. 2) standard if it is designed for use with a voltage rating between 50V and 1000V for AC or between 75 V and 1500V for DC.

5 Technical Requirements

5.1 Operating Frequencies

The CBS shall operate within the frequency bands given in Table 1. Conformance with technical requirements outlined in this Specification is based on the assumption that the operating frequency bands are shared between systems of the IMT family. When LAA is supported, in addition to frequency bands in Table 1, the license-exempt spectrum given in Table 1a should be utilised.

Table 1: CBS Operating Frequency Bands

UTRA FDD Band	E-UTRAN Band	NR Band	Direction of Transmission	Frequency Range
I	1	n1	Transmit	2110 MHz – 2170 MHz
			Receive	1920 MHz – 1980 MHz
III	3	n3	Transmit	1805 MHz – 1880 MHz
			Receive	1710 MHz – 1785 MHz
VII	7	n7	Transmit	2620 MHz – 2690 MHz

46c	5470 MHz – 5725 MHz
46d	5725 MHz – 5925 MHz <small>Note 2</small>
Note 1: Band 46 is divided into four sub-bands Note 2: LAA operating in band 46d shall only transmit and receive within Singapore's frequency spectrum allocation (5725 MHz – 5850 MHz)	

The precise operating frequency range of a CBS shall follow that of the Network Operator from whom the service is provided. Information on spectrum assignment to different Network Operators could also be found in IMDA's Spectrum Management Handbook.

5.2 Radio Interface Requirements

Manufacturers or suppliers shall demonstrate that the CBS (base stations or repeaters) have been tested and certified for operating in the frequency bands stated in Table 1 clause 5.1.1, and conformity to any or a combination of standards given in Table 2 for Base Stations or Table 3 for Repeaters.

(b)	LTE-Advanced	E-UTRA FDD	ETSI EN 301 908-15

The effective isotropic radiating power (EIRP) of base stations or repeaters in operation shall be limited to 62dBm/5MHz. The rated output power/TRP limits for base station classes (wide area, medium range and local area) will be according to Tables 6.2.1-1 and/or 6.2.1-2 (in ETSI TS 136 141 / TS 138 141-1) and 6.3.1-1 (in ETSI TS 138 141-2).

Use of the CBS shall comply with the International Commission on Non-Ionizing Radiation Protection (ICNIRP) guidelines for limiting exposure to time-varying electric, magnetic, and electromagnetic fields (up to 300 GHz).

CBS that supports E-UTRA with LAA shall be tested for compliance with the applicable requirements following test methods and conditions given in EN 301 908-14, or FCC Part 15 §15.407 and ANSI C63.10-2013. Power output limits and spurious emissions shall be tested and certified for conformity to the relevant requirements as given IMDA TS SRD.

⁴ Only for equipment that operates on LTE Band 26

Annex A CBS Conformance Testing / Verification Checklist

This Checklist is intended for facilitating Supplier's Declaration of Conformity to the requirements defined in the IMDA Technical Specification for Cellular Base Stations and Repeater Equipment ("IMDA TS CBS").

Please note:

"**CR**" indicates that the general or technical requirement set out in a particular section or sub-section ("§") of the IMDA TS CBS is a **Compliance Requirement**.

"**M**" means that it shall be **Mandatory** for the CBS to comply with the requirement set out in the IMDA TS CBS § cited in this Checklist (Table given below).

"**C**" means that compliance with the technical requirement set out in the IMDA TS CBS § cited in this Checklist is **Conditional**. In this case, the need to comply is contingent on the type of CBS (base station or repeater), RIT/RAT and application indicated in the remarks column.

"**V**" means that compliance with the requirement is **Voluntary**.

"**NA**" means that the requirement is **Not Applicable**.

Changes to IMDA TS CBS Issue 1 Rev 2, Sep 20			
		The IMDA TS CBS Issue 1 Rev 2 has been replaced by the IMDA TS CBS Issue 1 Rev 3.	Oct 2023
Whole document		(a) Reorganising the document by removing unnecessary information and avoiding pointing to references in the reference section	
§4.2.1.1		(b) Inclusion of current harmonics test methods of IEC/EN 61000-3-2 or IEC/EN 61000-3-12	
§4.2.2		(c) Inclusion of voltage fluctuations test methods of IEC/EN 61000-3-3 or IEC/EN 61000-3-11	
§5 Table 1		(d) Changes to equipment safety testing specifications	
§5 Table 2		(e) Inclusion of band 26	
		(f) Including ETSI TS 136 141, FCC Part 22/90S (for band 26 only), ETSI TS 138 141-1 and ETSI TS 138 141-2 as reference standards	
§5.2.2		(g) Including ETSI EN 301 908-23, ETSI TS 137 145-1 and ETSI TS 145-2 as reference standards for AAS BS	
Annex A		(h) Inclusion of rated output power/TRP limits according to base station classes	
Annex A		(i) Providing requirements for base stations operating on band 26	
Annex A		(j) Providing better clarity to requirements for different RAT by streamlining the requirement tables and separating them	
Annex A		(k) Providing requirements for NR based on the base station types (BS Type 1C, Type 1H, Type 1-0 and Type 2-0)	
		(l) Providing requirements for AAS capable BS

Changes to IMDA TS CBS Issue 1 Rev 1, Jul 17			
		The IMDA TS CBS Issue 1 Rev 1 has been replaced by the IMDA TS CBS Issue 1 Rev 2.	Sep 2020
		Changes were made to include specifications for 5G NR and to keep up with new developments that have taken place in the IMT systems of the network operators and standards.	
		Main changes include:	
5		(a) Removal of section on radiation safety	
5	§4.3.1.2	(b) Replacing CISPR 24 with CISPR 35 for immunity testing	
5 and 6	§4.3	(c) Removal of need to comply with ITU-T K.116 and IEC 60215	
7	Table 1, Table 1a	(d) Updating of CBS operating bands to include 5G NR; include license-exempt bands for LAA	
8	Table 2	(e) Support for 5G NR	
8	§5.2.2	(f) Included maximum power limits of equipment in operation	
8 and 12	§5.2.3 and Annex A	(g) Included support for LAA-enabled CBS	
9	Annex A	(h) Revision of Checklist to include support for 5G NR and to reflect changes in new developments in standards

Changes to IMDA TS CBS Issue 1, Oct 16			
2 and 7	§1 and §5.2 Table 2	The IMDA TS CBS Issue 1 has been replaced by the IMDA TS CBS Issue 1 Rev 1. Changes are intended to provide clarity of requirements for conformity assessment by equipment suppliers, in line with development that has taken place in the IMT systems of the network operators. Main changes include: (a) Support for LTE-Advanced TDD RIT (E-UTRAN RAT);	1 Jul 2017
7	§5.1.1 Table 1	(b) Use of E-UTRAN band 38 (2570 MHz – 2615 MHz) and band 40 (2300 MHz – 2340 MHz)	
9	Annex A	(c) Revision of Checklist for clarity in supporting LTE-Advanced TDD RIT (E-UTRAN RAT)

Changes to IDA TS CBS Issue 1, Jun 11			
2	§1	The IDA TS CBS Issue 1 has been replaced by the IMDA TS CBS Issue 1. Changes are largely editorial to provide clarity of requirements for conformity assessment by equipment suppliers, in line with standards development that has taken place in the SDOs and the IMT systems adopted by network operators. Main changes include: (a) Cessation of support for the GSM RITs by 1 April 2017;	1 Oct 2016
5	§4.3	(b) Updating of EMC and safety requirements for CBS;	
7	§5.2	(c) Updating of essential requirements for the support of IMT-Advanced / LTE-Advanced RITs; and	
8	Annex A	(d) Addition of a Checklist for facilitating suppliers' declaration of conformity to requirements defined in the Specification.

Changes to IDA TS GSM-BS Issue 1 Rev 2 and 3G-BS Issue 1 Rev 1, May 11			
3	§1.1	Title of Specification has been renamed as "Technical Specification for Cellular Base Station and Repeater System" (IDA TS CBS Issue 1). The Technical Specification has superseded the following two IDA Technical Specifications: (a) IDA TS GSM-BS Issue 1 Rev 2 (b) IDA TS 3G-BS Issue 1 Rev 1 Changes are mainly editorial in nature, in which the essential technical requirements for compliance formerly defined under the two Specifications (TS GSM-BS and 3G-BS) are now incorporated as one.	Jun 2011
4	§2.2.1	It also includes the requirements for the Radio Access Technology, E-UTRA.
