Location in document where you would like to comment on (State it in the following format: Page x, para y, Text line z/Table Z)	b) Summary of major points	c) Statement of interest	d) Comments	e) Conclusion
Page 6, point 2.	It's proposed with the allocation of 6GHz TS-SRD will be updated.	IMDA proposes to adopt the following technical requirements to be included in the IMDA Technical Specification for Short Range Devices (see Table 1 below) for RLAN use in the 5,945 MHz – 6,425 MHz band, which are largely aligned with key economies that have similarly allocated 6 GHz spectrum for RLAN use, indicating widespread acceptance that these broad restrictions are sufficient to protect incumbent services and allow Singapore to gain access to the global ecosystem.	Clarify when will the TS-SRD be updated.	
Page 6, footnote	Clarify whether RLAN equipment are currently exempted, whereas once the proposal is enforced such equipment will be required to be registered as SRD with IMDA	To give effect for licence-exempt RLAN use in the 5,945 MHz – 6,425 MHz band, the Telecommunications (Exemption from Sections 33, 34(1)(b) and 35) Notification will be amended.	<p>1. Clarify RLAN equipment are currently exempted from registration with IMDA but will be required once the TS-SRD is updated to include RLAN?</p> <p>2. Clarify what should Vendor do with existing RLAN already in the</p>	

	prior to import and how about existing equipment already in the market prior to this, can it continue to be supplied?		market prior to this new rule and requirement.
Page 7, 4.	Assurance on the compliance with PDPA and Cybersecurity regulations	To consider adding the criteria for the approval of the service provider to use the lower 500 MHz of the 6 GHz band	In order for IMDA to allow use of the 500 MHz of the 6 GHz band, please kindly consider the criteria for the approval of the service provider on the compliance and adherence to PDPA and Cybersecurity regulations to ensure the protection of privacy right.
