View from TP-Link on “IMDA Proposed Allocation of 6 GHZ Band in Singapore

TP-Link feedback as follow:

Summary:

1. Although TP-Link prefer the flexibility of able to utilize both the Lower 500MHz and the Upper 500 MHz. However, TP-Link will be able to support IMDA proposal to use the lower 500 MHz (5,925 – 6425 MHz) for the Singapore market. With the following range:
6G U-NII5 (5945-6425MHz) .
2. On the proposed IMDA technical requirements for RLAN, TP-Link will be able to adopt “Low Power Indoor”, Max EIRP: 24 dBm.

Comments:

1. As indicated as IMDA initial proposal, is the lower 500 MHz be a permanent approach or will IMDA be opening up the upper 500 MHz in the future?
2. To keep manufacturer posted on the development of the Higher power deployment for outdoor devices.

Summary:

TP-Link has not much of a concern and able to comply with the IMDA Proposed 6 GHz Band.
