Learning tailored to different legal practices

AlxLegal by SAL is delivered through a blended learning format comprising both physical and virtual sessions. The programme supports legal professionals in using AI tools such as ChatGPT, Copilot, Legora and vLex responsibly and effectively in their day-to-day work.

Junior lawyers can begin with the *AI for Common Workflows* track, which equips them with practical skills to integrate AI into everyday tasks such as legal research and drafting standard contracts. More experienced or specialised lawyers can choose from the specialised tracks to deepen their ability to apply AI within their respective areas of practice.

Learning beyond the classroom

Beyond the structured curriculum, learners receive continued support through physical clinics and learning events organised by SAL and its training partners.

Physical clinics

- Hands-on walkthroughs of live scenarios involving real-world legal tasks
- Guided exercises and prompting techniques
- Practical support in applying AI tools confidently within legal workflows

Learning events

- Sharing of best practices and emerging AI trends
- Demonstrations of legal AI tools and workflows
- Peer learning and practitioner sharing from across the legal community

Trainers

Designed for SAL members, particularly those without access to in-house training or upskilling opportunities, AIxLegal by SAL is delivered by practitioners with expertise in both law and technology. Their combined experience enables learners to bridge AI concepts with practical legal applications.
