

## *Second Consultation on 5G Mobile Services and Networks*

I am extremely concerned about the health impact of the roll out of 5G. There are scientists all over the world calling for more studies on the impact this will have on human health. There are serious concerns that it will have a very negative impact on humans and flora and fauna. There are already cases of children developing cancer in schools that are near 5G towers.

As a concerned resident of Singapore I would choose not to use 5G but it seems as if the public will have no choice in this matter. If 5G is rolled out across Singapore and we are not able to avoid it, I will leave the country with my entire family and I know many other people who feel exactly the same.
