Annex: Nine dimensions of the proposed Model AI Governance Framework

This **Model AI Governance Framework for Generative AI** seeks to set forth a systematic and balanced approach to address generative AI concerns while facilitating innovation. It involves key stakeholders, including policymakers, industry and the research community to collectively do their part. Nine dimensions should be looked at in totality, to enable and foster a trusted ecosystem.

Fostering a Trusted AI Ecosystem

1. Accountability
Putting in place the right incentive structure for different players in the AI system development life cycle to be responsible to end-users

2. Data
Ensuring data quality and addressing potentially contentious training data in a pragmatic way, as data is core to model development

3. Trusted Development and Deployment
Enhancing transparency around baseline safety and hygiene measures based on industry best practices in development, evaluation and disclosure

4. Incident Reporting
Implementing an incident management system for timely notification, remediation and continuous improvements, as no AI system is foolproof

5. Testing and Assurance
Providing external validation and added trust through third-party testing, and developing common AI testing standards for consistency

6. Security
Addressing new threat vectors that arise through generative AI models

7. Content Provenance
Transparency about where content comes from as useful signals for end-users

8. Safety and Alignment R&D
Accelerating R&D through global cooperation among AI Safety Institutes to improve model alignment with human intention and values

9. AI for Public Good
Responsible AI includes harnessing AI to benefit the public by democratising access, improving public sector adoption, upskilling workers and developing AI systems sustainably
